Global state computation and hashing
Time shading: +/- 1 SD; global account count is recorded separately from batch size
(a) Global state processing
$T_p(N)$ [s]
$10^{-4}$
$10^{-5}$
$2^0$
$2^1$
$2^2$
$2^3$
$2^4$
$2^5$
Batch size $N$ [tx]
Global state copy
New state computation (Executor)
Previous state hash
New state hash
