Global state computation and hashing
Time shading: +/- 1 SD; global account count is recorded separately from batch size
(a) Global state processing
$T_p(N)$ [s]
10^{-4}
10^{-5}
2^0
2^1
2^2
2^3
2^4
2^5
Batch size N [tx]
Global state copy
New state computation (Executor)
Previous state hash
New state hash
