CPU work and memory occupancy per phase p
CPU shading: +/- 1 SD; memory: mean of repetition peaks
(a) Total CPU work
$W_{\mathrm{CPU},p}(N)$ [core s]
Batch size N [tx]
(b) Mean CPU work per transaction
$\bar{W}_{\mathrm{CPU},p}(N) = W_{\mathrm{CPU},p}(N)/N$ [core s/tx]
Batch size N [tx]
(c) Peak memory occupancy
$M_p^{\mathrm{peak}}(N)$ [bytes]
Batch size N [tx]
(d) Mean peak memory per transaction
$M_p^{\mathrm{peak}}(N)/N$ [bytes/tx]
Batch size N [tx]
