Global state computation and hashing
Time shading: +/- 1 SD; global account count is recorded separately from batch size
(a) Global state processing
$T_p(N)$ [s]
10^{-2}
10^{-3}
10^{-4}
2^1
2^3
2^5
2^7
2^9
2^{11}
2^{13}
Batch size N [tx]
Global state copy
New state computation (Executor)
Previous state hash
New state hash
