Throughput: observed and predicted
Phase: prove; logspace and large calibration designs
(a) logspace: throughput
(b) large: throughput
(c) logspace: prediction error
(d) large: prediction error
$\Lambda_p = N/T_p$ [tx/s]
Throughput error: 100 (predicted / observed - 1) [%]
Batch size N [tx]
rapidsnark
snarkjs
Observed
Affine (power term = 0)
Calibration size
Held-out size
Largest calibration size
