CPU work and memory occupancy per phase p
CPU shading: +/- 1 SD; memory: mean of repetition peaks
(a) Total CPU work
$W_{CPU,p}(N)$ [core s]
Batch size N [tx]
(b) Mean CPU work per transaction
$\bar{W}_{CPU,p}(N) = W_{CPU,p}(N)/N$ [core s/tx]
Batch size N [tx]
(c) Peak memory occupancy
$M_p^{peak}(N)$ [bytes]
Batch size N [tx]
(d) Mean peak memory per transaction
$M_p^{peak}(N)/N$ [bytes/tx]
Batch size N [tx]
