CPU and RAM amortization versus phase throughput elasticity
$\gamma_{\Lambda,p} = d\ln\Lambda_p/d\ln N$; RAM occupancy amortization need not equal throughput elasticity
(a) rapidsnark/prove
(b) snarkjs/prove
(c) verify
Positive elasticity: gain
Negative elasticity: loss
Elasticity (dimensionless)
Batch size N [tx]
CPU amortization $\xi_{\mathrm{CPU},p} = 1 - \gamma_{\mathrm{CPU},p}$
Throughput elasticity $\gamma_{\Lambda,p} = d\ln\Lambda_p/d\ln N$
RAM occupancy amortization $\xi_{\mathrm{RAM},p} = 1 - \gamma_{\mathrm{RAM},p}$
